The physical disks and images can be stored in a free and reliable way. Physical cloned disks contain exactly the same data as the original but are of different formats. Physical clones can be distinguished from other copies by certain features, such as the presence of a RAID stripe. Using physical clones, you can create backups in a way that is much faster and more reliable than with tape backup or ZIP disks. How to use: 1. The program is a front-end to several programs. In order to use the application, you need to install the tools used by the software in the system. However, the program is able to work without the tools installed. 2. If the target disk/partition has been formatted, you need to make a clone first and then use it to copy the existing files on it. 3. The program runs on Windows 2000/XP/2003/Vista/7/8 (32/64 bit), including ME, 2000 Server, 2003 Server. The program does not run on Windows 95/98. 4. Before you run the clone procedure, be sure that the system's hard disk (or any partition on the disk) does not have any important data. Your work can be ruined if there is a data error in the system at the time of copying the files. 5. For a copy operation on a partition/disk that has been set up to use a logical volume, the application has to run in the "Read Only" mode. 6. As soon as the program finishes, you can run any programs to use the disk/partition. 7. The program creates read-only image files of the disk/partition and saves them to the same folder or to a different folder on the same disk/partition, or to a floppy disk, or to an external disk. 8. To start the clone process, click on the "Clone" button. 9. The program automatically connects to the toolbox. Choose the toolbox/drive that the program will connect to and then click on the "Start clone" button. 10. If you want to change the location of the copied files, you can use the "Browse..." option and navigate to the folder where you want to save them. 11. If you select a physical disk, you can check the "New physical disk" option.

When you select the option, you will get a message that you need to 82157476af
